this unique textbook presents a novel axiomatic pedagogical path from classical to quantum physics readers are introduced to the description of classical mechanics which rests on euler s and helmholtz s rather than newton s or hamilton s representations special attention is given to the common attributes rather than to the differences between classical and quantum mechanics readers will also learn about schrödinger s forgotten demands on quantization his equation einstein s idea of quantization as selection problem the schrödinger equation is derived without any assumptions about the nature of quantum systems such as interference and superposition or the existence of a quantum of action h the use of the classical expressions for the potential and kinetic energies within quantum physics is justified key features presents extensive reference to original texts includes many details that do not enter contemporary representations of classical mechanics although these details are essential for understanding quantum physics contains a simple level of mathematics which is seldom higher than that of the common riemannian integral brings information about important scientists carefully introduces basic equations notations and quantities in simple steps this book addresses the needs of physics students teachers and historians with its simple easy to understand presentation and comprehensive approach to both classical and quantum mechanics

international food aid has rightly been credited with saving millions of lives and is often the only thing that stands between vulnerable people and death however it was a serious obstacle in the doha round of multilateral trade negotiations and has been sharply criticised as a donor driven response that creates dependency on the part of recipients and undermines local agricultural producers and traders upon whom sustainable food security depends this issue of the state of food and agriculture report examines the issues and controversies surrounding international food aid particularly in crisis situations it considers the ways in which food aid can support sustainable improvements in food security in order to preserve its essential humanitarian role whilst minimising the possibility of harmful secondary impacts

voluntary approaches include environmental agreements negotiated with industry and public programs which firms can volunteer to participate in they are increasingly

supplementing or replacing other environmental policy instruments such as regulations taxes and tradable permits however their environmental effectiveness and economic efficiency are often challenged questions often asked include do voluntary approaches deliver the expected environmental benefits do they help reach environmental targets in a cost effective way this report assesses the use of voluntary approaches by building on a number of new case studies and an extensive search of the available literature the focus of the analysis is on the environmental effectiveness economic efficiency and administrative costs of voluntary approaches either used in isolation or as part of policy mixes this report concludes that the environmental effectiveness of voluntary approaches is often questionable and their economic efficiency is generally low while administrative and transaction costs vary greatly among voluntary approaches it is clear that if too few resources are spent in their preparation negotiation and enforcement their environmental impacts are likely to be modest combining a voluntary approach with a tax or a tradable permit system can trigger quite significant additional administrative costs and the environmental integrity of the other instrument can be weakened

while much foreign aid achieves commendable goals some is ineffective in this volume clifford zinnes argues that a donor s intrinsic informational limitations on the local context as well as inability to control the progress of interventions mean that lack of success is not rooting in insufficient funding but in maladapted institution designs of interventions that don t foster local ownership he indentifies and assesses a newly emerging class of foreign aid delivery that promises to overcome these obstacles the approach is based on prospective inter jurisdictional competition pijc beneficiary groups often local level governments supported by their private sector and civil society act as teams and compete against each other under explicit predefined rules and objectives to design and implement interventions under their own aegis to achieve the highest quantitatively measured performance either relative to others tournaments or against a preset benchmark certification teams that cooperate internally are the likeliest to win the rewards which aside from the longer run benefits of the intervention itself might include more substantive financial or technical assistance from the sponsor since only groups serious about reforming choose to play zinnes says the incentives generated by the ensuing race to the top competition create local ownership encouraging recipients to draw on their own knowledge moreover since all teams that compete and not just those who win donor rewards benefit from their own

reform efforts he argues that this approach can leverage aid resources more than a conventional bilateral aid agreement zinnen presents a dozen recent applications of the approach including those sponsored by the world bank usaid the united nations the ford foundation and others he also recommends improvements and ways to scale up pijc based projects in applications ranging from protecting the environment and reducing red tape through to raising literacy and co opting warlords
