this book explores three interwoven and challenging areas of research and development for future ict enabled applications software intensive systems complex systems and intelligent systems software intensive systems are systems that extensively interact with other systems sensors actuators devices and users more and more domains are now employing software intensive systems e g the automotive sector telecommunication systems embedded systems in general industrial automation systems and business applications moreover the outcome of web services offers a new platform for enabling

software intensive systems complex systems research is focused on the overall understanding of systems rather than their components complex systems are very much characterized by the changing environments in which they operate through their multiple internal and external interactions they evolve and adapt through internal and external dynamic interactions the development of intelligent systems and agents which is increasingly characterized by the use of ontologies can be beneficial for software intensive systems and complex systems alike accordingly recent research in the areas of intelligent systems robotics neuroscience artificial intelligence and the cognitive sciences is essential to the future development of software intensive and complex systems

this book provides the latest research findings innovative research results methods and development techniques from both theoretical and practical perspectives related to the emerging areas of information networking and their applications the networks and information systems of today are evolving rapidly there are new trends and applications in information networking such as wireless sensor networks ad hoc networks peer to peer systems vehicular networks opportunistic networks grid and cloud computing pervasive and ubiquitous computing multimedia systems security multi agent systems high speed networks and web based systems these kinds of networks need to manage the increasing number of users provide support for different services guarantee the qos and optimize the network resources for these networks there are many research issues and challenges that should be considered and find solutions

this book provides the latest research findings and discusses from both theoretical and practical perspectives innovative research methods and development techniques related to intelligent social networks and collaborative systems intelligent networking systems mobile collaborative systems and secure intelligent cloud systems it also presents the synergies among various paradigms in such a multi disciplinary field of intelligent collaborative systems with the rapid development of the internet we are experiencing a shift from the traditional sharing of information and applications as the main purpose of the to an emergent paradigm which locates people at the very centre of networks and exploits the value of individuals connections relations and collaboration social networks are also playing a major role in the dynamics and structure of intelligent based networking and collaborative systems virtual campuses virtual communities and organizations strongly leverage intelligent networking and collaborative systems by means of a great variety of formal and informal electronic relations such as business to business peer to peer and various types of online collaborative learning interactions including the emerging e learning systems this has resulted in entangled systems that need to be managed efficiently and autonomously in addition the latest powerful technologies based on grid and wireless infrastructure as well as cloud computing are currently enhancing collaborative and networking applications significantly but are also facing new issues and challenges the principal purpose of the research and development community is to stimulate research that will lead to the creation of responsive environments for networking and in the longer term the development of adaptive secure mobile and intuitive intelligent systems for collaborative work and learning

language has long been considered independent from emotions in the last few years however research

has accumulated empirical evidence against this theoretical belief of a purely cognitive based foundation of language in particular through research on emotional word processing it has been shown that processing of emotional words activates emotional brain structures elicits emotional facial expressions and modulates action tendencies of approach and avoidance probably in a similar manner as processing of non verbal emotional stimuli does in addition it has been shown that emotional content is already processed in the visual cortex in a facilitated manner which suggests that processing of emotional language content is able to circumvent in depth semantic analysis yet this is only one side of the coin very recent research putting words into context suggests that language may also construe emotions and that by studying word processing one can provide a window to one s own feelings all in all the empirical observations support the thesis of a close relationship between language and emotions at the level of word meaning as a specific evolutionary achievement of the human species as such this relationship seems to be different from the one between emotions and speech where emotional meaning is conveyed by nonverbal features of the voice but what does this relationship between written words and emotions theoretically imply for the processing of emotional information the present research topic and its related articles aim to provide answers to this question this book comprises several experimental studies investigating the brain structures and the time course of emotional word processing included are studies examining the affective core dimensions underlying affective word processing and studies that show how these basic affective dimensions influence word processing in general as well as the interaction between words feelings and expressive behavior in addition new impetus comes from studies that on the one hand investigate how task sublexical and intrapersonal factors influence emotional word processing and on the other hand extend emotional word processing to the domains of social context and self related processing finally future perspectives are outlined including research on emotion and language acquisition culture and multilingualism in summary this textbook offers scientists from different disciplines insight into the neurophysiological behavioral and subjective mechanisms underlying emotion and language interactions it gives new impulses to existing theories on the embodiment of language and emotion and provides new ways of looking at emotion cognition interactions

this book aims to provide the latest research findings innovative research results methods and development techniques from both theoretical and practical perspectives related to intelligent social networks and collaborative systems intelligent networking systems mobile collaborative systems secure intelligent cloud systems etc as well as to reveal synergies among various paradigms in such a multi disciplinary field intelligent collaborative systems with the fast development of the internet we are experiencing a shift from the traditional sharing of information and applications as the main purpose of the to an emergent paradigm which locates people at the very centre of networks and exploits the value of people s connections relations and collaboration social networks are also playing a major role in the dynamics and structure of intelligent based networking and collaborative systems virtual campuses virtual communities and organizations strongly leverage intelligent networking and collaborative systems by a great variety of formal and informal electronic relations such as business to business peer to peer and many types of online collaborative learning interactions including the

emerging e learning systems this has resulted in entangled systems that need to be managed efficiently and in an autonomous way in addition latest and powerful technologies based on grid and wireless infrastructure as well as cloud computing are currently enhancing collaborative and networking applications as a great deal but also facing new issues and challenges the principal purpose of the research and development community is to stimulate research that will lead to the creation of responsive environments for networking and at longer term the development of adaptive secure mobile and intuitive intelligent systems for collaborative work and learning

biomedical defense principles to counter dna deep hacking presents readers with a comprehensive look at the emerging threat of dna hacking dr rocky termanini goes in depth to uncover the erupting technology being developed by a new generation of savvy bio hackers who have skills and expertise in biomedical engineering and bioinformatics the book covers the use of tools such as crispr for malicious purposes which has led agencies such as the u s office of the director of national intelligence to add gene editing to its annual list of threats posed by weapons of mass destruction and proliferation readers will learn about the methods and possible effects of bio hacking attacks and in turn the best methods of autonomic and cognitive defense strategies to detect capture analyze and neutralize dna bio hacking attacks including the versatile dna symmetrical ai cognitive defense system acds dna bio hackers plan to destroy distort and contaminate confidential healthy dna records and potentially create corrupted genes for erroneous diagnosis of illnesses disease genesis and even wrong dna fingerprinting for criminal forensics investigations presents a comprehensive reference for the fascinating emerging technology of dna storage the first book to present this level of detail and scope of coverage of this groundbreaking field helps readers understand key concepts of how dna works as an information storage system and how it can be applied as a new technology for data storage provides readers with key technical understanding of technologies used to work with dna data encoding such as crispr as well as emerging areas of application and ethical concern such as smart cities cybercrime and cyber warfare includes coverage of synthesizing dna encoded data sequencing dna encoded data and fusing dna with digital immunity ecosystem die

this text teaches by example how to create models simulate performance simulations and analyse results it takes a quantitative approach and covers a range of event driven and time driven models in addition it is software independent to make implementations as generic as possible which allows for experimentation with different implementations includes 100 worked examples incorporates a number of disciplines in modeling process algorithms and programs available on associated web site

in order to take full advantage of the helicopter s unique flight characteristics enhanced terminal instrument procedures terps need to be developed for a variety of non standard operational situations these include non standard landing navigation aids precision and non precision approach profiles landing sites and avionics systems currently terps criteria are largely established by extensive flight testing this study examined the requirements for using helicopter cockpit simulators in place of flight testing to generate data necessary for enhanced terps development
